**ALL BOLTS.**

**NO CRACKS.**

**PAYLOAD  
STRENGTH**

**MAINTENANCE  
DOWNTIME**

## ***No one else builds like this.***

Hicks is the only manufacturer offering a fully bolted, weld-free aluminum body. No weld cracks. No warping. No costly downtime. Our customers are adding to and upgrading their fleets because they know Hicks trailers deliver. We build for lighter weight, superior strength, and long-term durability—so you can haul more, maintain less, and stay on the road longer. Our modular design makes repairs fast, simple, and cost-effective, restoring your trailer to like-new condition with minimal effort.

## ***With 70+ years innovation.***

Proudly serving the hauling industry for over 70 years, the Hicks family innovation in building trailers demonstrates the superior performance of bolted joints. Like a truck chassis frame or a bridge, bolting with Huckbolts® is superior to welding.

**Bolting with Huckbolts® is superior to welding.**

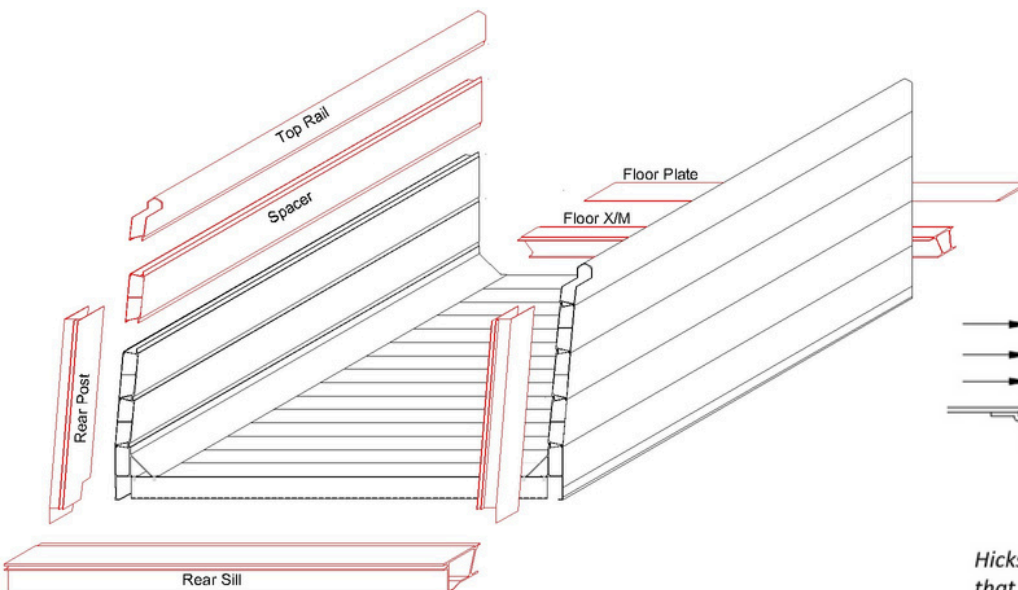

### Superior Strength

Degradation occurs in raw material during welding. Designed with 2 times the strength and 10 times the life, Hicks's patented, weld-free, aluminum dump body and trailer design is constructed with 3.5" double-wall aluminum extrusions that interlock with HuckBolts® fasteners.

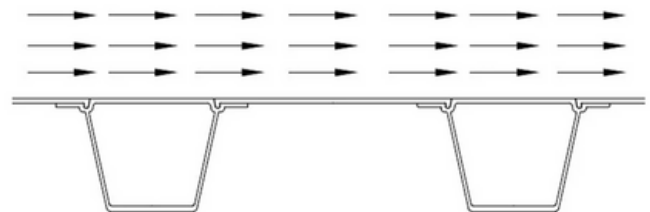

[https://www.hfsindustrial.com/us/huck\\_replaces\\_welding](https://www.hfsindustrial.com/us/huck_replaces_welding)

### Hicks Key Features:

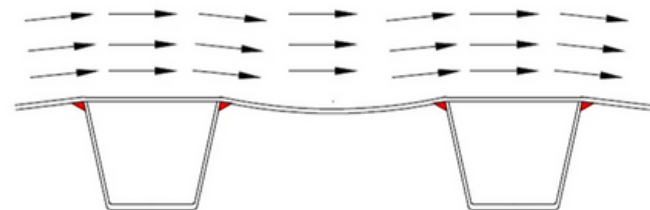

- Bolted body with superior strength
- 3.5" double walls
- DOM steel hinge with greater stability, longer life, less maintenance
- Inverted Cylinder = no doghouse = easy service and exceptional strength and integrity in an area which ordinarily needs frequent weld maintenance and repairs
- LED lights
- Rotating tailgate lock
- Replaceable, protective switch & valve cartridge
- Aluminum stiff legs
- Kingpin rollers
- Trapezoid member subframe
- Modularity with replaceable floors, sides, posts, sills, lightbox

## NO WARPING

*Hicks's trailer floor is constructed entirely from extrusions that interlock. The result is a perfectly flat floor that allows payload to discharge smoothly.*

*A floor with welded crossmembers will always distort from heat. The result is a "washboard" surface with high spots that will wear excessively with discharge payload.*

## HICKS DUMP BODIES AND TRAILERS INCLUDE 100% WARRANTY ON PARTS FOR 5 YEARS, LABOR 1 YEAR

## THREE GENERATIONS OF AMERICAN MANUFACTURING

**For over 70 years, we have dedicated ourselves to maximizing your uptime and payload.** We understand how painful costly maintenance and repairs are. Glen Hicks recognized as early as the 1950s that bolted joints perform in areas where welded joints fail. Aluminum alloys used in extrusions lose much of their yield strength when welded. Hicks has structural integrity in areas of commonly low yield strength where competitors' units crack. Hicks will provide you with lower weight, a beautiful finish, and greater durability.
